You Hold Scar Healing in Your Hand

The International Clinical Recommendations on Scar Management named silicone as the single most recommended topical (non-invasive) treatment for scars.1

Silicone gel is effective as a treatment if it is in contact with the scar area 24 hours a day for the duration of the treatment. BIOCORNEUM puts you in control. Do your part by applying it twice a day for the length of treatment your doctor recommends.

Recommended sizing:

Length based on a linear scar with a coverage width of 0.5 inch, at two applications per day.

How to apply BIOCORNEUM

- Ensure that the affected area is clean and dry.
- Apply a thin, even layer twice a day (morning and evening) over the scar area.
- Allow to dry completely.
- After application wait 15 minutes before sun exposure.
- Once dry, BIOCORNEUM can be covered with pressure garments, clothing, cosmetics or additional sunscreen as needed.

BIOCORNEUM should have 24-hour contact with the scar area for the duration of the treatment. This can be achieved by applying BIOCORNEUM twice a day.

Your Physician Recommends BIOCORNEUM

Your physician knows that BIOCORNEUM is the only advanced scar treatment with Silishield patented crosslinking silicone plus SPF 30 protection. BIOCORNEUM can be used to prevent and minimize the appearance of hypertrophic (raised, red) scars and keloids. It can be used on scars resulting from surgical and cosmetic procedures, trauma, wounds, and burns, and it can be effective on old or new scars.

CAUTION: BIOCORNEUM is for external use only. Avoid direct contact with eyes, mucous membranes, third degree burns, and open wounds. BIOCORNEUM should not be used on damaged or broken skin. If irritation occurs, discontinue use and consult your physician. Keep this product out of reach of children. This product has not been shown to help prevent skin cancer or early skin aging.

Manufactured in the USA for Sientra, Inc., Santa Barbara CA 93107

YOUR PHYSICIAN’S CHOICE FOR ADVANCED SCAR TREATMENT
How BIOCORNEUM Works

The Science of Scar Reduction

BIOCORNEUM’s key ingredient, FDA-Cleared Silishield™ Technology patented crosslinking silicone, advances the benefits of traditional silicone sheeting through the comfort and ease of a gel. Silishield forms a protective shield over the scar area that is optimal for scar healing and cosmetic improvement. Silishield’s patented technology, made with medical grade silicone, helps to keep skin hydrated and helps control excessive collagen formation that contributes to abnormal scarring.2

Sunscreen products protect the area from sun exposure’s darkening effects while BIOCORNEUM maintains its silky-smooth feel and clear appearance.

Easy, Effective Care for Scar Recovery

- FDA-Cleared Silishield™ Technology plus SPF 30 sunscreen
- Silky-smooth clear gel is simple to apply and dries quickly
- Forms a breathable, flexible protective shield that moves like a second skin
- Self-adhering – won’t peel, no tape required
- Ideal for skin that must flex a lot (such as around joints), irregular surfaces, as well as large scar areas
- Ideal for face, neck, chest, hands, and other areas exposed to the sun
- Once dry, continues to work when makeup, lotion, or additional SPF protection is applied over it
- Can be combined with other treatment options your physician recommends
- Suitable for children over the age of 6 months

Scar Treatment Mechanism of Action

1. Healthy skin is made up of many layers. The top layer — the stratum corneum — protects the layers below and helps to hold moisture in.

2. A surgical incision or injury creates a gap in the protective layers of the skin.

3. Within one to two weeks, skin cells begin to fill the gap. But this new skin control holds moisture in as well as healthy skin does.

4. Extra moisture triggers (blue arrows) deeper skin layers to produce excessive collagen (red arrows). Without treatment, this action can lead to abnormal scarring.

5. Treatment with silicone gel reduces water loss that can cause scarring.

BIOCORNEUM is your invisible protective shield in the months while the scar heals. Its sunscreen agents protect the scar from sun exposure’s darkening effects.

6. This treatment can prevent and minimize the formation of hypertrophic or keloid (red or raised) scars, decrease the appearance of old scars, and help to restore the function of affected skin.

BIOCORNEUM gives you more control over your recovery process.

Scars can be an unwanted visual reminder of a past procedure or injury. But scars are not simply cosmetic. Scar tissue lacks the full function of skin that hasn’t been injured or involved in a surgery. For example, flexibility and the sense of touch may be diminished or completely lost in the scar area. Effectively treating a scar can help to complete your healing process.4,5

39% to 68% of patients develop hypertrophic scars after surgery.3 BIOCORNEUM gives you more control toward a beautiful recovery.

BIOCORNEUM by Sientra is the only advanced scar treatment with Silishield patented crosslinking silicone plus the protection of SPF 30 — to support healing inside and out. BIOCORNEUM forms an invisible shield to create an optimal healing environment that can:• prevent and minimize the formation of hypertrophic or keloid (red or raised) scars,• decrease the appearance of old scars, and• help to restore the function of affected skin.
